

Lambro Finance

LAMBRO is a simple fixed cap supply BEP-20 token on the Binance Smart Chain. It has absolutely no utility and no deflationary or inflationary mechanisms. The token has a fixed supply of 1,000,000 and provided as a liquidity pool on PancakeSwap at a rate of 0.2 BNB for 1,000,000 LAMBRO. Therefore the initial launch price is 0.0000002 BNB.

The LP redemption tokens have been burned, as well as the contract owner. This was done to ensure the initial liquidity can not be withdrawn by the admin from PancakeSwap and no more LAMBRO can be minted. The token is final and no one has control over it at this point.

There was no pre-mine or airdrop, and there's no team allocation or reserve. The entire supply is in circulation and everyone needs to buy it from the open market.

There can only be 1 million Lambros, are you 1 of them?
